Exercise

1. Create a HTML page which has a container div. This div should take height and width of the page.Add a fixed background image to this div which should cover the whole page and should not be repeated.
2. Create a content div(height and width 500px respectively) inside the container Add a background image to the content div which should also be horizontally and vertically centered.
3. Add p tag inside the content div. The text of the p tag should overflow content height and therefore there must be a scroll on the content div. The background image of the content should scroll with the text.
4. Add background color red to the p tag. The color should be a hex value.
5. Add a footer to the container div which should contain 3 span tags having background image of facebook , instagram and twitter icons in the same order as written.

6. Create a div with height and width 100px. Animate id twice for total 4 seconds. It should change the opacity of the element from 1 to 0 and then to 0.5. Animation should start after 3 seconds.

7. Create a div with height 100px and width 200px respectively. It's background-color should be #ff00ff with a 1px solid border coloured #000. On active change it's height to 200px and width to 100px. Background-color should be #000 with a 2px solid border colored #ff00ff. Also scale it to thrice it's height and twice its width. The whole process should have transition for all the above mentioned properties which should run for 3 seconds.
